

TAKE SOLID EDGE TO THE NEXT LEVEL WITH EDA

EDA HELPS COMPANIES DESIGN BETTER AND MAKE QUOTES FASTER THROUGH SOFTWARE CUSTOMIZATION, INTEGRATION & AUTOMATION.

Automation for Solid Edge® that will allow a complete novice to create perfectly designed models and assemblies with a few clicks. Web-based configurators that enable your customers to design custom products online and receive their 3D models and drawings via email in minutes. Generating custom sheet metal flat patterns on the fly from orders received via your website.

EDA can provide your company with any number of software customizations, integration, and custom automation software development solutions to accomplish all this and more.

Whether you are looking for a simple automation add-in for Solid Edge to eliminate repetitive or time-consuming processes, or you dream of building an entire online configurator and estimating system to drive your models, EDA has the expertise and the experience to help you accomplish your goals.

Since 1991, EDA has worked with numerous manufacturers and designers to revolutionize the way they design and build Engineered-to-Order products. Our goal is to help you eliminate your design and estimating bottlenecks, reduce turnaround time to your customers, and increase profitability.

As a Siemens Solutions Partner for Solid Edge and a long-time developer of custom automation applications, EDA can help you with all your website, CAD, estimating, custom configuration, and manufacturing automation needs.

Schedule an online demo today with one of our experienced application engineers and see how EDA can elevate your Solid Edge experience to the next level.

FREQUENTLY ASKED QUESTIONS

Q Does EDA offer an off-the-shelf automation solution for Solid Edge or only custom programming services?

A Both! EDA has developed standalone applications that automate time-consuming Solid Edge processes and free 30-day trials of these programs are available at our website. We also offer a range of custom programming services.

Q How much will it cost to automate my company's product lines?

A The complexity of your design rules and product options, as well as the functions you wish to include in your system will determine length and cost of the project. Contact EDA for a free estimate for your automation project.

Q Does EDA have case studies showing what kind of productivity can be achieved with engineering automation?

A Yes. EDA has worked with companies in many industries including conveyors, transmission towers, tanks, electric enclosures and more. See "Client Success" on our website to find out how our software and services have helped these companies.

Q Can the automated system be integrated with a PLM, ERP or MRP system?

A Yes. The automated system can be integrated with any existing company system to import and export information and streamline information flow.
